

Enrichments

AT CISCO FAMILY CONNECTION IN BUILDING 25

A complete educational package for your child

Enrichments are enhanced learning opportunities that are part of our daily program. The following enrichments are included in your monthly tuition:

Movement Matters: Including but not limited to yoga, balance, rock climbing on the indoor rock wall, music and movement

Baby Signing: Sign language for infants and toddlers

Handwriting without Tears®: An introduction to letter writing for preschool and above

Everyday Mathematics®: A hands-on introduction to math concepts for preschool and above

Art/Computers/Technology: Innovative tools that support learning for twos and above

Second Language: Programs that focus on infusing an additional language into children's learning

Garden Works/Woodworking: Children in all age groups discover science through gardening

Bright Horizons also provides dedicated spaces that are designed to promote experiences above and beyond what happens in the classroom; these spaces include*:

- Children's Library
- Music and Performing Art Studio
- STEAM Lab
- Movement Matters Zone (physical education)

*Please note all of the enrichments are included in your monthly tuition.

Cisco Family Connection

Meet Your Enrichment Teacher

Hello I am 'Mr. John.'

For twenty-five years I have worked in early childhood education beginning with Montessori Certification through the University of California at Berkeley. As an artist educator with a Master's of Science in education and a Bachelor of Arts in interdisciplinary studies I am excited to further the development of a STEAM Curriculum for young children.

STEAM is an acronym representing science, technology, engineering, arts and math. My aspiration is to help demonstrate how the 'expressive arts and sciences' through music, movement, exploration and play can sustain an essential role in constructing children's early learning experiences. I am an accomplished musician and as a visual artist in traditional painting I have been professionally recognized by curators from The Oakland Museum of Art, The Los Angeles County Museum of Modern Art, and The San Diego Museum of Modern Art. As a child development specialist, adjunct professor and consultant I have presented workshops for NAEYC, CAEYC, The California STEM Symposium, along with in-service trainings for parents, teachers, and staff in public and private early childhood education programs.

I am looking forward to supporting your children's interest in the science and arts in a way that sustains their enrichment, their engagement, and their love for learning. 'Full Steam Ahead!'
